# Kapitel 1

## Einleitung

Die Bände 18–26 entwickeln Halbgruppen und ihre Spezialisierungen, Band 27 Monoide und Band 28 Halbringe. Der vorliegende Band ergänzt zunächst die Existenz inverser Elemente und gelangt so zu Gruppen und abelschen Gruppen. Danach wird die Konstruktion der ganzen Zahlen aus Band 13 verallgemeinert: Jedes kommutative kürzbare Monoid wird durch formale Differenzen in eine abelsche Gruppe eingebettet. Anschließend werden zwei Operationen auf demselben Träger miteinander verbunden: Die Addition bildet eine abelsche Gruppe, die Multiplikation ein Monoid, und beide Operationen erfüllen die Distributivgesetze. Dies führt zu Ringen mit Eins und zu kommutativen Ringen mit Eins.

Die in Band 13 konstruierten ganzen Zahlen bilden das grundlegende Beispiel. Ihre bereits aus der Quotientenkonstruktion hergeleiteten Rechengesetze werden am Ende dieses Bandes zu den entsprechenden algebraischen Strukturaussagen zusammengefasst.

Wie in den Bänden 18–20 gehört jede Operation obligatorisch zur Strukturbezeichnung. Daher schreiben wir beispielsweise  $\text{Grp}(G, \circ, e)$  und  $\text{Ring}(R, \oplus, \odot, 0_R, 1_R)$ , niemals bloß  $\text{Grp}(G)$  oder  $\text{Ring}(R)$ .

# Kapitel 2

## Gruppen

### 2.1 Gruppen als Monoide mit Inversen

**Axiom 29.2.1.1** (Existenz eines beidseitigen Inversen).

*Mengen:*  $G, e, x, y$   
*Funktionen:*  $\circ$

$$\text{Mon}(G, \circ, e), x \in G \vdash \\ \exists y \in G (x \circ y = e \wedge y \circ x = e)$$

**Definition 29.2.1.1** (Begriff der Gruppe).

*Mengen:*  $G, e, x, y$   
*Funktionen:*  $\circ$   
*Axiome:*  
*Monoid:*  $\text{Mon}(G, \circ, e)$  *Def. 27.2.1.1*  
*Beidseitige Inverse:*  $x \in G \vdash$  *Ax. 29.2.1.1*  
 $\exists y \in G (x \circ y = e \wedge y \circ x = e)$   
*Neues Symbol:*  
*Gruppe:*  $\triangleright \text{Grp}(G, \circ, e)$

$$\text{Grp}(G, \circ, e)$$

**Axiom 29.2.1.2** (Monoidanteil einer Gruppe).

*Mengen:*  $G, e$   
*Funktionen:*  $\circ$

$$\text{Grp}(G, \circ, e) \vdash \text{Mon}(G, \circ, e)$$

**Axiom 29.2.1.3** (Inverse in einer Gruppe).

**Mengen:**  $G, e, x, y$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash \\ \exists y \in G (x \circ y = e \wedge y \circ x = e)$$

## 2.2 Grundlegende Gruppengesetze

**Theorem 29.2.2.1 (Halbgruppenanteil einer Gruppe).**

**Mengen:**  $G, e$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e) \vdash \text{HGr}(G, \circ)$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 1 & 2 \text{ Mon}(G, \circ, e) \quad \text{Ax. 29.2.1.2(1)} \\ 1 & 3 \text{ HGr}(G, \circ) \quad \text{Ax. 27.2.1.1(2)} \end{array}$$

**Theorem 29.2.2.2 (Abgeschlossenheit der Gruppenoperation).**

**Mengen:**  $G, e, x, y$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x, y \in G \vdash x \circ y \in G$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 x \in G \quad A \\ 3 & 3 y \in G \quad A \\ 1 & 4 \text{ HGr}(G, \circ) \quad \text{Th. 29.2.2.1(1)} \\ 1,2,3 & 5 x \circ y \in G \quad \text{Ax. 18.2.1.1(4, 2, 3)} \end{array}$$

**Theorem 29.2.2.3 (Assoziativität der Gruppenoperation).**

**Mengen:**  $G, e, x, y, z$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x, y, z \in G \vdash \\ (x \circ y) \circ z = x \circ (y \circ z)$$

|         |   |                                             |                       |
|---------|---|---------------------------------------------|-----------------------|
| 1       | 1 | $\text{Grp}(G, \circ, e)$                   | $A$                   |
| 2       | 2 | $x \in G$                                   | $A$                   |
| 3       | 3 | $y \in G$                                   | $A$                   |
| 4       | 4 | $z \in G$                                   | $A$                   |
| 1       | 5 | $\text{HGr}(G, \circ)$                      | Th. 29.2.2.1(1)       |
| 1,2,3,4 | 6 | $(x \circ y) \circ z = x \circ (y \circ z)$ | Ax. 18.2.1.2(5,2,3,4) |

**Theorem 29.2.2.4 (Neutrales Element liegt im Gruppenträger).**

**Mengen:**  $G, e$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e) \vdash e \in G$$

|   |   |                           |                 |
|---|---|---------------------------|-----------------|
| 1 | 1 | $\text{Grp}(G, \circ, e)$ | $A$             |
| 1 | 2 | $\text{Mon}(G, \circ, e)$ | Ax. 29.2.1.2(1) |
| 1 | 3 | $e \in G$                 | Ax. 27.2.1.2(2) |

**Theorem 29.2.2.5 (Linksneutralität in einer Gruppe).**

**Mengen:**  $G, e, x$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash e \circ x = x$$

|     |   |                           |                   |
|-----|---|---------------------------|-------------------|
| 1   | 1 | $\text{Grp}(G, \circ, e)$ | $A$               |
| 2   | 2 | $x \in G$                 | $A$               |
| 1   | 3 | $\text{Mon}(G, \circ, e)$ | Ax. 29.2.1.2(1)   |
| 1,2 | 4 | $e \circ x = x$           | Ax. 27.2.1.3(3,2) |

**Theorem 29.2.2.6 (Rechtsneutralität in einer Gruppe).**

**Mengen:**  $G, e, x$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash x \circ e = x$$

|     |   |                           |                   |
|-----|---|---------------------------|-------------------|
| 1   | 1 | $\text{Grp}(G, \circ, e)$ | $A$               |
| 2   | 2 | $x \in G$                 | $A$               |
| 1   | 3 | $\text{Mon}(G, \circ, e)$ | Ax. 29.2.1.2(1)   |
| 1,2 | 4 | $x \circ e = x$           | Ax. 27.2.1.4(3,2) |

## 2.3 Eindeutigkeit des Inversen

**Theorem 29.2.3.1** (Eindeutigkeit aus Links- und Rechtsinverse).

**Mengen:**  $G, e, x, y, z$

**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x, y, z \in G, y \circ x = e, x \circ z = e \\ \vdash y = z$$

*Beweis.*

**Einsetzen der Rechtsinverse**

Th. 29.2.3.1(i)

$$\text{Grp}(G, \circ, e), x, y, z \in G, y \circ x = e, x \circ z = e \\ \vdash y = y \circ (x \circ z)$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 x \in G \quad A \\ 3 & 3 y \in G \quad A \\ 4 & 4 z \in G \quad A \\ 5 & 5 y \circ x = e \quad A \\ 6 & 6 x \circ z = e \quad A \\ 1,3 & 7 y = y \circ e \quad \text{Th. 2.9.1.1(Th. 29.2.2.6(1,3))} \\ 6 & 8 y \circ e = y \circ (x \circ z) = E(6) \\ 1,2,3,4,5,6 & 9 y = y \circ (x \circ z) \quad \text{Tr.}(7, 8) \end{array}$$

**Reduktion mit der Linksinversen**

Th. 29.2.3.1(ii)

$$\text{Grp}(G, \circ, e), x, y, z \in G, y \circ x = e, x \circ z = e \\ \vdash y \circ (x \circ z) = z$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 x \in G \quad A \\ 3 & 3 y \in G \quad A \\ 4 & 4 z \in G \quad A \\ 5 & 5 y \circ x = e \quad A \\ 6 & 6 x \circ z = e \quad A \\ 1,2,3,4 & 7 y \circ (x \circ z) = (y \circ x) \circ z \text{Th. 2.9.1.1(Th. 29.2.2.3(1,3,2,4))} \\ 5 & 8 (y \circ x) \circ z = e \circ z = E(5) \\ 1,4 & 9 e \circ z = z \quad \text{Th. 29.2.2.5(1,4)} \\ 1,2,3,4,5,6 & 10 y \circ (x \circ z) = z \quad \text{Tr.}(7, 8, 9) \end{array}$$

### Verknüpfung beider Teilrechnungen

Th. 29.2.3.1(iii)

$$\text{Grp}(G, \circ, e), x, y, z \in G, y \circ x = e, x \circ z = e \\ \vdash y = z$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 \ x \in G \quad A \\ 3 & 3 \ y \in G \quad A \\ 4 & 4 \ z \in G \quad A \\ 5 & 5 \ y \circ x = e \quad A \\ 6 & 6 \ x \circ z = e \quad A \\ 1,2,3,4,5,6 & 7 \ y = y \circ (x \circ z) \text{Th. 29.2.3.1(i)(1,2,3,4,5,6)} \\ 1,2,3,4,5,6 & 8 \ y \circ (x \circ z) = z \text{Th. 29.2.3.1(ii)(1,2,3,4,5,6)} \\ 1,2,3,4,5,6 & 9 \ y = z \quad \text{Tr.}(7,8) \end{array}$$

□

### Definition 29.2.3.1 (Inverses Element).

**Mengen:**  $G, e, x, y$   
**Funktionen:**  $\circ$   
**Träger:**  $x^{-1} \in G$   
**Rechtsinverse:**  $x \circ x^{-1} = e$   
**Linksinverse:**  $x^{-1} \circ x = e$   
**Eindeutigkeit:** Th. 29.2.3.1  
**Neues Symbol:**  
**Inverses Element:**  $\triangleright x^{-1}$

$$\text{Grp}(G, \circ, e), x \in G \vdash \\ x^{-1} := \iota y (y \in G \wedge x \circ y = e \wedge y \circ x = e)$$

### Theorem 29.2.3.2 (Inverses Element liegt im Gruppenträger).

**Mengen:**  $G, e, x$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash x^{-1} \in G$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 \ x \in G \quad A \\ 1,2 & 3 \ x^{-1} \in G \quad \text{Def. 29.2.3.1(1,2)} \end{array}$$

### Theorem 29.2.3.3 (Rechtsinverse Gleichung).

**Mengen:**  $G, e, x$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash x \circ x^{-1} = e$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 \quad x \in G \quad A \\ 1,2 & 3 \quad x \circ x^{-1} = e \text{ Def. 29.2.3.1(1,2)} \end{array}$$

**Theorem 29.2.3.4 (Linksinverse Gleichung).**

**Mengen:**  $G, e, x$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), x \in G \vdash x^{-1} \circ x = e$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 \quad x \in G \quad A \\ 1,2 & 3 \quad x^{-1} \circ x = e \text{ Def. 29.2.3.1(1,2)} \end{array}$$

## 2.4 Kürzungsgesetze

**Theorem 29.2.4.1 (Linkskürzung in Gruppen).**

**Mengen:**  $G, e, a, b, c$   
**Funktionen:**  $\circ$

$$\text{Grp}(G, \circ, e), a, b, c \in G, a \circ b = a \circ c \vdash b = c$$

*Beweis.*

**Linksmultiplikation mit dem Inversen**

Th. 29.2.4.1(i)

$$\text{Grp}(G, \circ, e), a, b, c \in G, a \circ b = a \circ c \vdash (a^{-1} \circ a) \circ b = (a^{-1} \circ a) \circ c$$

$$\begin{array}{ll} 1 & 1 \text{ Grp}(G, \circ, e) \quad A \\ 2 & 2 \quad a \in G \quad A \\ 3 & 3 \quad b \in G \quad A \\ 4 & 4 \quad c \in G \quad A \\ 5 & 5 \quad a \circ b = a \circ c \quad A \end{array}$$

|             |    |                                                              |                                    |
|-------------|----|--------------------------------------------------------------|------------------------------------|
| 1,2         | 6  | $a^{-1} \in G$                                               | Th. 29.2.3.2(1,2)                  |
| 5,6         | 7  | $a^{-1} \circ (a \circ b) = a^{-1} \circ (a \circ c) = E(5)$ |                                    |
| 1,2,3,6     | 8  | $(a^{-1} \circ a) \circ b = a^{-1} \circ (a \circ b)$        | Th. 29.2.2.3(1,6,2,3)              |
| 1,2,4,6     | 9  | $a^{-1} \circ (a \circ c) = (a^{-1} \circ a) \circ c$        | Th. 2.9.1.1(Th. 29.2.2.3(1,6,2,4)) |
| 1,2,3,4,5,6 | 10 | $(a^{-1} \circ a) \circ b = (a^{-1} \circ a) \circ c$        | Tr.(8, 7, 9)                       |

### Reduktion auf das neutrale Element

Th. 29.2.4.1(ii)

$$\text{Grp}(G, \circ, e), a, b, c \in G, a \circ b = a \circ c \vdash \\ e \circ b = e \circ c$$

|           |    |                                                       |                            |
|-----------|----|-------------------------------------------------------|----------------------------|
| 1         | 1  | $\text{Grp}(G, \circ, e)$                             | $A$                        |
| 2         | 2  | $a \in G$                                             | $A$                        |
| 3         | 3  | $b \in G$                                             | $A$                        |
| 4         | 4  | $c \in G$                                             | $A$                        |

## Kapitel 3

# Abelsche Gruppen

**Axiom 29.3.1 (Kommutativität einer Gruppenoperation).**

*Mengen:*  $G, e, x, y$

*Funktionen:*  $\circ$

$$\text{Grp}(G, \circ, e), x, y \in G \vdash x \circ y = y \circ x$$

**Definition 29.3.1 (Begriff der abelschen Gruppe).**

*Mengen:*  $G, e, x, y$

*Funktionen:*  $\circ$

*Axiome:*

*Gruppe:*  $\text{Grp}(G, \circ, e)$  *Def. 29.2.1.1*

*Kommutativität:*  $x, y \in G \vdash x \circ y = y \circ x$  *Ax. 29.3.1*

*Neues Symbol:*

*Abelsche Gruppe:*  $\triangleright \text{AGrp}(G, \circ, e)$

$$\text{AGrp}(G, \circ, e)$$

**Axiom 29.3.2 (Gruppenanteil einer abelschen Gruppe).**

*Mengen:*  $G, e$

*Funktionen:*  $\circ$

$$\text{AGrp}(G, \circ, e) \vdash \text{Grp}(G, \circ, e)$$

**Axiom 29.3.3 (Kommutativität in einer abelschen Gruppe).**

*Mengen:*  $G, e, x, y$

*Funktionen:*  $\circ$

$$\text{AGrp}(G, \circ, e), x, y \in G \vdash x \circ y = y \circ x$$

**Theorem 29.3.1 (Abelsche Gruppen sind kommutative Monoide).**

*Mengen:*  $G, e, x, y$

*Funktionen:*  $\circ$

$$\text{AGrp}(G, \circ, e) \vdash \text{KMon}(G, \circ, e)$$

$$\begin{array}{llll} 1 & 1 & \text{AGrp}(G, \circ, e) & A \\ 1 & 2 & \text{Grp}(G, \circ, e) & \text{Ax. 29.3.2(1)} \\ 1 & 3 & \text{Mon}(G, \circ, e) & \text{Ax. 29.2.1.2(2)} \\ 4 & 4 & x \in G & A \\ 5 & 5 & y \in G & A \\ 1,4,5 & 6 & x \circ y = y \circ x & \text{Ax. 29.3.3(1, 4, 5)} \\ 1 & 7 & \text{KMon}(G, \circ, e) & \text{Def. 27.2.3.2(3, 6)} \end{array}$$

## Kapitel 4

# Homomorphismen von Gruppen

### 4.1 Gruppenhomomorphismen

Bei Gruppen genügt die Erhaltung der Gruppenoperation. Anders als bei beliebigen Monoiden folgen die Erhaltung des neutralen Elements und der Inversen aus der Existenz von Inversen im Ziel.

**Definition 29.4.1.1 (Begriff des Gruppenhomomorphismus).**

|                                   |                                                                |
|-----------------------------------|----------------------------------------------------------------|
| <i>Mengen:</i>                    | $G, H, e, u, x, y$                                             |
| <i>Funktionen:</i>                | $f, \circ, \diamond$                                           |
| <i>Axiome:</i>                    |                                                                |
| <i>Quellgruppe:</i>               | $\triangleright \text{Grp}(G, \circ, e)$                       |
| <i>Zielgruppe:</i>                | $\triangleright \text{Grp}(H, \diamond, u)$                    |
| <i>Halbgruppenhomomorphismus:</i> | $\triangleright \text{HGrHom}(f; G, \circ; H, \diamond)$       |
| <i>Neues Symbol:</i>              |                                                                |
| <i>Gruppenhomomorphismus:</i>     | $\triangleright \text{GrpHom}(f; G, \circ, e; H, \diamond, u)$ |

$$\text{GrpHom}(f; G, \circ, e; H, \diamond, u)$$

**Axiom 29.4.1.1 (Trägerabbildung eines Gruppenhomomorphismus).**

|                    |                      |
|--------------------|----------------------|
| <i>Mengen:</i>     | $G, H, e, u$         |
| <i>Funktionen:</i> | $f, \circ, \diamond$ |

$$\text{GrpHom}(f; G, \circ, e; H, \diamond, u) \vdash f: G \rightarrow H$$

**Axiom 29.4.1.2 (Operationserhaltung eines Gruppenhomomorphismus).**

|                    |                      |
|--------------------|----------------------|
| <i>Mengen:</i>     | $G, H, e, u, x, y$   |
| <i>Funktionen:</i> | $f, \circ, \diamond$ |

$$\text{GrpHom}(f; G, \circ, e; H, \diamond, u), \quad x, y \in G \vdash f(x \circ y) = f(x) \diamond f(y)$$

**Theorem 29.4.1.1 (Gruppenhomomorphismen erhalten das neutrale Element).**

**Mengen:**  $G, H, e, u$

**Funktionen:**  $f, \circ, \diamond$

$$\text{GrpHom}(f; G, \circ, e; H, \diamond, u) \vdash f(e) = u$$

|   |    |                                                   |                                         |
|---|----|---------------------------------------------------|-----------------------------------------|
| 1 | 1  | $\text{GrpHom}(f; G, \circ, e; H, \diamond, u) A$ |                                         |
| 1 | 2  | $\text{Grp}(G, \circ, e)$                         | Def. 29.4.1.1(1)                        |
| 1 | 3  | $\text{Grp}(H, \diamond, u)$                      | Def. 29.4.1.1(1)                        |

### 4.3 Spezielle Definitionen

Für abelsche Gruppen bleibt die Erhaltungsgleichung unverändert. Die Kommutativität ist eine Eigenschaft von Quell- und Zielgruppe, keine weitere Forderung an die Abbildung.

**Definition 29.4.3.1 (Homomorphismen abelscher Gruppen).**

**Mengen:**  $G, H, e, u$   
**Funktionen:**  $f, \circ, \diamond$   
**Erhaltungsgesetz:**  $x, y \in G \vdash f(x \circ y) = f(x) \diamond f(y)$   
**Neues Symbol:**  
**Symbol:**  $\triangleright \text{AGrpHom}$

$$\begin{aligned} \text{AGrpHom}(f; G, \circ, e; H, \diamond, u) \\ &:= \text{AGrp}(G, \circ, e) \wedge \text{AGrp}(H, \diamond, u) \\ &\quad \wedge \text{GrpHom}(f; G, \circ, e; H, \diamond, u) \end{aligned}$$

**Axiom 29.4.3.1 (Quellstruktur eines Homomorphismus abelscher Gruppen).**

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$

$$\text{AGrpHom}(f; G, \circ, e; H, \diamond, u) \vdash \text{AGrp}(G, \circ, e)$$

**Axiom 29.4.3.2 (Zielstruktur eines Homomorphismus abelscher Gruppen).**

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$

$$\text{AGrpHom}(f; G, \circ, e; H, \diamond, u) \vdash \text{AGrp}(H, \diamond, u)$$

**Axiom 29.4.3.3 (Gruppenhomomorphismusanteil eines Homomorphismus abelscher Gruppen).**

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$

$$\text{AGrpHom}(f; G, \circ, e; H, \diamond, u) \vdash \text{GrpHom}(f; G, \circ, e; H, \diamond, u)$$

**Definition 29.4.3.2 (Isomorphismen abelscher Gruppen).**

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$   
*Neues Symbol:*  
*Symbol:*  $\triangleright \text{AGrpIso}$

$$\begin{aligned} \text{AGrpIso}(f; G, \circ, e; H, \diamond, u) \\ &:= \text{AGrpHom}(f; G, \circ, e; H, \diamond, u) \wedge f: G \xrightarrow{\sim} H \end{aligned}$$

**Axiom 29.4.3.4 (Homomorphismusanteil eines Isomorphismus abelscher Gruppen).**

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$

$$\text{AGrpIso}(f; G, \circ, e; H, \diamond, u) \vdash \text{AGrpHom}(f; G, \circ, e; H, \diamond, u)$$

**Axiom 29.4.3.5** (Bijektivität eines Isomorphismus abelscher Gruppen).

*Mengen:*  $G, H, e, u$   
*Funktionen:*  $f, \circ, \diamond$

$$\text{AGrpIso}(f; G, \circ, e; H, \diamond, u) \vdash f: G \xrightarrow{\sim} H$$

Ein Gruppenisomorphismus transportiert die Kommutativität in beiden Richtungen. Deshalb stimmt diese Spezialisierung mit der üblichen Isomorphie abelscher Gruppen überein.

## Kapitel 5

# Formale Differenzen und der Einbettungssatz

### 5.1 Differenzenpaare

Sei im Folgenden  $\text{KMon}(M, \star, e)$ , und sei  $\star$  kürzbar. Die Konstruktion aus Band 13 wird nun mit der vollständigen Ausgangsstruktur  $(M, \star, e)$  im Index wiederholt.

**Definition 29.5.1.1 (Träger der formalen Differenzenpaare).**

*Mengen:*  $M, e, D_{M, \star, e}$   
*Funktionen:*  $\star$   
*Neue Symbole:*  $D_{M, \star, e}$

$$\text{KMon}(M, \star, e) \vdash D_{M, \star, e} := M \times M$$

**Definition 29.5.1.2 (Äquivalenz formaler Differenzenpaare).**

*Mengen:*  $M, e, a, b, c, d$   
*Funktionen:*  $\star$   
*Relationsoperatoren:*  $\sim_{M, \star, e}$   
*Trägermenge:*  $D_{M, \star, e}$   
*Neue Symbole:*  $\sim_{M, \star, e}$

$$\begin{aligned} &\text{KMon}(M, \star, e), a, b, c, d \in M \vdash \\ &(a, b) \sim_{M, \star, e} (c, d) := a \star d = b \star c \end{aligned}$$

**Theorem 29.5.1.1 (Charakterisierung der Relation formaler Differenzen).**

*Mengen:*  $M, e, a, b, c, d$   
*Funktionen:*  $\star$   
*Relationsoperatoren:*  $\sim_{M, \star, e}$

$$\text{KMon}(M, \star, e), a, b, c, d \in M \vdash \\ (a, b) \sim_{M, \star, e} (c, d) \leftrightarrow a \star d = b \star c$$

$$\begin{array}{ll} 1 & 1 \text{ KMon}(M, \star, e) \quad A \\ 2 & 2 \text{ } a, b, c, d \in M \quad A \\ 1,2 & 3 \text{ } (a, b) \sim_{M, \star, e} (c, d) \leftrightarrow a \star d = b \star c \text{ Def. 29.5.1.2(1, 2)} \end{array}$$

**Theorem 29.5.1.2 (Reflexivität auf formalen Differenzenpaaren).**

**Mengen:**  $M, e, a, b$   
**Funktionen:**  $\star$   
**Relationsoperatoren:**  $\sim_{M, \star, e}$

$$\text{KMon}(M, \star, e), a, b \in M \vdash \\ (a, b) \sim_{M, \star, e} (a, b)$$

$$\begin{array}{ll} 1 & 1 \text{ KMon}(M, \star, e) \quad A \\ 2 & 2 \text{ } a, b \in M \quad A \\ 1,2 & 3 \text{ } a \star b = b \star a \quad Ax. 27.2.3.4(1, 2) \\ 1,2 & 4 \text{ } (a, b) \sim_{M, \star, e} (a, b) \text{ Th. 29.5.1.1(1, 2, 3)} \end{array}$$

**Theorem 29.5.1.3 (Symmetrie auf formalen Differenzenpaaren).**

**Mengen:**  $M, e, a, b, c, d$   
**Funktionen:**  $\star$   
**Relationsoperatoren:**  $\sim_{M, \star, e}$

$$\text{KMon}(M, \star, e), a, b, c, d \in M, (a, b) \sim_{M, \star, e} (c, d) \vdash \\ (c, d) \sim_{M, \star, e} (a, b)$$

$$\begin{array}{ll} 1 & 1 \text{ KMon}(M, \star, e) \quad A \\ 2 & 2 \text{ } a, b, c, d \in M \quad A \\ 3 & 3 \text{ } (a, b) \sim_{M, \star, e} (c, d) A \\ 1,2,3 & 4 \text{ } c \star b = b \star c \quad Ax. 27.2.3.4(1,2) \\ 1,2,3 & 5 \quad = a \star d \quad Th. 2.9.1.1(Th. 29.5.1.1(1,2,3)) \\ 1,2,3 & 6 \quad = d \star a \quad Ax. 27.2.3.4(1,2) \\ 1,2,3 & 7 \text{ } c \star b = d \star a \quad Tr.(4, 6) \\ 1,2,3 & 8 \text{ } (c, d) \sim_{M, \star, e} (a, b) \text{ Th. 29.5.1.1(1,2,7)} \end{array}$$

**Theorem 29.5.1.4 (Transitiver Kreuzproduktvergleich).**

**Mengen:**  $M, e, a, b, c, d, f, g$   
**Funktionen:**  $\star$

$\text{KMon}(M, \star, e), a, b, c, d, f, g \in M, a \star d = b \star c, c \star g = d \star f \vdash$   
 $(a \star g) \star (c \star d) = (b \star f) \star (c \star d)$

1,2 \ 8 \ \text{AGrp}\left(\mathcal{G}_{M,\star,e}, \boxplus_{M,\star,e}, 0_{M,\star,e}^{\mathcal{G}}\right) \wedge & \wedge I(3, \wedge I(6, 7)) \\
\text{KMonHom}\left(\iota_{M,\star,e}^{\mathcal{G}}; M, \star, e; \mathcal{G}_{M,\star,e}, \boxplus_{M,\star,e}, 0_{M,\star,e}^{\mathcal{G}}\right) \wedge & \\
\iota_{M,\star,e}^{\mathcal{G}}: M \rightarrow \mathcal{G}_{M,\star,e} &
\end{array}$$

*Bemerkung.* Die Kürzbarkeit wird in dieser Konstruktion beim Nachweis der Transitivität der Relation formaler Differenzen verwendet. Die Gleichheitsreflexion der kanonischen Einbettung folgt anschließend bereits aus den Neutralitätsgesetzen. Für  $(M, \star, e) = (\mathbb{N}, +, 0)$  ergeben die Definitionen dieselbe Kreuzsummenrelation und dieselbe Klassenoperation wie die Konstruktion der ganzen Zahlen in Band 13.

# Kapitel 6

## Ringe mit Eins

### 6.1 Ringaxiome

**Axiom 29.6.1.1 (Links distributivität).**

*Mengen:*  $R, a, b, c$   
*Funktionen:*  $+, \cdot$

$$a, b, c \in R \vdash a \cdot (b + c) = a \cdot b + a \cdot c$$

**Axiom 29.6.1.2 (Rechts distributivität).**

*Mengen:*  $R, a, b, c$   
*Funktionen:*  $+, \cdot$

$$a, b, c \in R \vdash (a + b) \cdot c = a \cdot c + b \cdot c$$

**Definition 29.6.1.1 (Begriff des Rings mit Eins).**

|                                  |                                                                     |                      |
|----------------------------------|---------------------------------------------------------------------|----------------------|
| <i>Mengen:</i>                   | $R, 0, 1, a, b, c$                                                  |                      |
| <i>Funktionen:</i>               | $+, \cdot$                                                          |                      |
| <i>Axiome:</i>                   |                                                                     |                      |
| <i>Additive abelsche Gruppe:</i> | $\text{AGrp}(R, +, 0)$                                              | <i>Def. 29.3.1</i>   |
| <i>Multiplikatives Monoid:</i>   | $\text{Mon}(R, \cdot, 1)$                                           | <i>Def. 27.2.1.1</i> |
| <i>Links distributivität:</i>    | $a, b, c \in R \vdash$<br>$a \cdot (b + c) = a \cdot b + a \cdot c$ | <i>Ax. 29.6.1.1</i>  |
| <i>Rechts distributivität:</i>   | $a, b, c \in R \vdash$<br>$(a + b) \cdot c = a \cdot c + b \cdot c$ | <i>Ax. 29.6.1.2</i>  |
| <i>Neues Symbol:</i>             |                                                                     |                      |
| <i>Ring mit Eins:</i>            | $\triangleright \text{Ring}(R, +, \cdot, 0, 1)$                     |                      |

$$\text{Ring}(R, +, \cdot, 0, 1)$$

**Axiom 29.6.1.3 (Additiver Anteil eines Rings).**

*Mengen:*  $R, 0, 1$   
*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1) \vdash \text{AGrp}(R, +, 0)$$

**Axiom 29.6.1.4 (Multiplikativer Anteil eines Rings).**

*Mengen:*  $R, 0, 1$   
*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1) \vdash \text{Mon}(R, \cdot, 1)$$

**Axiom 29.6.1.5 (Linkes Distributivgesetz eines Rings).**

*Mengen:*  $R, 0, 1, a, b, c$   
*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1), a, b, c \in R \vdash a \cdot (b + c) = a \cdot b + a \cdot c$$

**Axiom 29.6.1.6 (Rechtes Distributivgesetz eines Rings).**

*Mengen:*  $R, 0, 1, a, b, c$   
*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1), a, b, c \in R \vdash (a + b) \cdot c = a \cdot c + b \cdot c$$

## 6.2 Kommutative Ringe

**Axiom 29.6.2.1 (Kommutativität der Ringmultiplikation).**

*Mengen:*  $R, 0, 1, a, b$   
*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1), a, b \in R \vdash a \cdot b = b \cdot a$$

**Definition 29.6.2.1 (Begriff des kommutativen Rings mit Eins).**

*Mengen:*  $R, 0, 1, a, b$   
*Funktionen:*  $+, \cdot$   
*Axiome:*  
*Ring mit Eins:*  $\text{Ring}(R, +, \cdot, 0, 1)$  *Def. 29.6.1.1*  
*Kommutative Multiplikation:*  $a, b \in R \vdash a \cdot b = b \cdot a$  *Ax. 29.6.2.1*  
*Neues Symbol:*  
*Kommutativer Ring mit Eins:*  $\triangleright \text{KRing}(R, +, \cdot, 0, 1)$

$$\text{KRing}(R, +, \cdot, 0, 1)$$

**Axiom 29.6.2.2 (Ringanteil eines kommutativen Rings).**

*Mengen:*  $R, 0, 1$

*Funktionen:*  $+, \cdot$

$$\text{KRing}(R, +, \cdot, 0, 1) \vdash \text{Ring}(R, +, \cdot, 0, 1)$$

**Axiom 29.6.2.3 (Multiplikationskommutativität im kommutativen Ring).**

*Mengen:*  $R, 0, 1, a, b$

*Funktionen:*  $+, \cdot$

$$\text{KRing}(R, +, \cdot, 0, 1), a, b \in R \vdash a \cdot b = b \cdot a$$

## 6.3 Abgeleitete Trägersetze

**Theorem 29.6.3.1 (Additive Gruppe eines Rings).**

*Mengen:*  $R, 0, 1$

*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1) \vdash \text{Grp}(R, +, 0)$$

$$\begin{array}{l} 1 \ 1 \ \text{Ring}(R, +, \cdot, 0, 1) \ A \end{array}$$

$$\begin{array}{l} 1 \ 2 \ \text{AGrp}(R, +, 0) \quad \text{Ax. 29.6.1.3(1)} \end{array}$$

$$\begin{array}{l} 1 \ 3 \ \text{Grp}(R, +, 0) \quad \text{Ax. 29.3.2(2)} \end{array}$$

**Theorem 29.6.3.2 (Multiplikative Halbgruppe eines Rings).**

*Mengen:*  $R, 0, 1$

*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1) \vdash \text{HGr}(R, \cdot)$$

$$\begin{array}{l} 1 \ 1 \ \text{Ring}(R, +, \cdot, 0, 1) \ A \end{array}$$

$$\begin{array}{l} 1 \ 2 \ \text{Mon}(R, \cdot, 1) \quad \text{Ax. 29.6.1.4(1)} \end{array}$$

$$\begin{array}{l} 1 \ 3 \ \text{HGr}(R, \cdot) \quad \text{Ax. 27.2.1.1(2)} \end{array}$$

**Theorem 29.6.3.3 (Abgeschlossenheit der Ringmultiplikation).**

*Mengen:*  $R, 0, 1, a, b$

*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1), a, b \in R \vdash a \cdot b \in R$$

|       |   |                                  |                                |
|-------|---|----------------------------------|--------------------------------|
| 1     | 1 | $\text{Ring}(R, +, \cdot, 0, 1)$ | $A$                            |

{}_{1,2,3} 6 \quad -(-(a \cdot b)) = a \cdot b & \text{Th. 29.6.4.4(1, Th. 29.6.3.3(1,2,3))} \\
{}_{1,2,3} 7 \quad (-a) \cdot (-b) = a \cdot b & \text{Tr.(4, 5, 6)}
\end{array}$$

# Kapitel 7

## Homomorphismen von Ringen

### 7.1 Der einem Ring zugrunde liegende Halbring

Die Nullabsorption wurde für Ringe aus den übrigen Ringaxiomen hergeleitet. Damit ist jeder Ring mit Eins insbesondere ein Halbring mit Eins. Dieses Resultat erlaubt es, die kanonische Abbildung aus  $\mathbb{N}$  ohne eine zweite Rekursionskonstruktion zu verwenden.

**Theorem 29.7.1.1 (Jeder Ring mit Eins ist ein Halbring mit Eins).**

*Mengen:*  $R, 0, 1, a, b, c$

*Funktionen:*  $+, \cdot$

$$\text{Ring}(R, +, \cdot, 0, 1) \vdash \text{Hring}(R, +, \cdot, 0, 1)$$

|         |    |                                           |                              |
|---------|----|-------------------------------------------|------------------------------|
| 1       | 1  | $\text{Ring}(R, +, \cdot, 0, 1)$          | $A$                          |

## 7.2 Ringhomomorphismen

Da alle Ringe dieses Bandes ein ausgezeichnetes Einselement besitzen, meint *Ringhomomorphismus* im Folgenden stets einen einserhaltenden Ringhomomorphismus.

**Definition 29.7.2.1 (Begriff des Ringhomomorphismus).**

|                                |                                                                     |
|--------------------------------|---------------------------------------------------------------------|
| <b>Mengen:</b>                 | $R, S, 0_R, 1_R, 0_S, 1_S$                                          |
| <b>Funktionen:</b>             | $f, \oplus, \odot, \boxplus, \boxtimes$                             |
| <b>Axiome:</b>                 |                                                                     |
| <b>Quellring:</b>              | $\triangleright \text{Ring}(R, \oplus, \odot, 0_R, 1_R)$            |
| <b>Zielring:</b>               | $\triangleright \text{Ring}(S, \boxplus, \boxtimes, 0_S, 1_S)$      |
| <b>Additiver Anteil:</b>       | $\triangleright \text{GrpHom}(f; R, \oplus, 0_R; S, \boxplus, 0_S)$ |
| <b>Multiplikativer Anteil:</b> | $\triangleright \text{MonHom}(f; R, \odot, 1_R; S, \boxtimes, 1_S)$ |
| <b>Neues Symbol:</b>           |                                                                     |
| <b>Symbol:</b>                 | $\triangleright \text{RingHom}$                                     |

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Axiom 29.7.2.1 (Trägerabbildung eines Ringhomomorphismus).**

|                    |                                         |
|--------------------|-----------------------------------------|
| <b>Mengen:</b>     | $R, S$                                  |
| <b>Funktionen:</b> | $f, \oplus, \odot, \boxplus, \boxtimes$ |

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash f: R \rightarrow S$$

**Axiom 29.7.2.2 (Additionserhaltung eines Ringhomomorphismus).**

|                    |                                         |
|--------------------|-----------------------------------------|
| <b>Mengen:</b>     | $R, S, x, y$                            |
| <b>Funktionen:</b> | $f, \oplus, \odot, \boxplus, \boxtimes$ |

$$\begin{aligned} &\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S), \quad x, y \in R \\ &\vdash f(x \oplus y) = f(x) \boxplus f(y) \end{aligned}$$

**Axiom 29.7.2.3 (Multiplikationserhaltung eines Ringhomomorphismus).**

|                    |                                         |
|--------------------|-----------------------------------------|
| <b>Mengen:</b>     | $R, S, x, y$                            |
| <b>Funktionen:</b> | $f, \oplus, \odot, \boxplus, \boxtimes$ |

$$\begin{aligned} &\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S), \quad x, y \in R \\ &\vdash f(x \odot y) = f(x) \boxtimes f(y) \end{aligned}$$

**Axiom 29.7.2.4 (Einserhaltung eines Ringhomomorphismus).**

**Mengen:**  $R, S, 1_R, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash f(1_R) = 1_S$$

**Theorem 29.7.2.1 (Ringhomomorphismen erhalten die Null).**

**Mengen:**  $R, S, 0_R, 0_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash f(0_R) = 0_S$$

$$\begin{array}{ll} 1 \ 1 \ \text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) & A \\ 1 \ 2 \ \text{GrpHom}(f; R, \oplus, 0_R; S, \boxplus, 0_S) & \text{Def. 29.7.2.1(1)} \\ 1 \ 3 \ f(0_R) = 0_S & \text{Th. 29.4.1.1(2)} \end{array}$$

**Theorem 29.7.2.2 (Ringhomomorphismen erhalten additive Inverse).**

**Mengen:**  $R, S, x$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S), \ x \in R \vdash f(-x) = -f(x)$$

$$\begin{array}{ll} 1 \ 1 \ \text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) & A \\ 2 \ 2 \ x \in R & A \\ 1 \ 3 \ \text{GrpHom}(f; R, \oplus, 0_R; S, \boxplus, 0_S) & \text{Def. 29.7.2.1(1)} \\ 1,2 \ 4 \ f(-x) = -f(x) & \text{Th. 29.4.1.2(3,2)} \end{array}$$

## 7.3 Ringisomorphismen und Komposition

**Definition 29.7.3.1 (Begriff des Ringisomorphismus).**

**Mengen:**  $R, S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$   
**Axiome:**  
**Ringhomomorphismus:**  $\triangleright \text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$   
**Bijektivität:**  $\triangleright f: R \xrightarrow{\sim} S$   
**Neues Symbol:**  
**Ringisomorphismus:**  $\triangleright \text{RingIso}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$

$$\text{RingIso}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Theorem 29.7.3.1 (Komposition von Ringhomomorphismen).**

**Mengen:**  $R, S, T$

**Funktionen:**  $f, g, \oplus, \odot, \boxplus, \boxtimes, \uplus, \otimes$

$$\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S),$$

$$\text{RingHom}(g; S, \boxplus, \boxtimes, 0_S, 1_S; T, \uplus, \otimes, 0_T, 1_T)$$

$$\vdash \text{RingHom}(g \circ f; R, \oplus, \odot, 0_R, 1_R; T, \uplus, \otimes, 0_T, 1_T)$$

|     |    |                                                                                       |                         |
|-----|----|---------------------------------------------------------------------------------------|-------------------------|
| 1   | 1  | $\text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$     | $A$                     |
| 2   | 2  | $\text{RingHom}(g; S, \boxplus, \boxtimes, 0_S, 1_S; T, \uplus, \otimes, 0_T, 1_T)$   | $A$                     |
| 1   | 3  | $\text{GrpHom}(f; R, \oplus, 0_R; S, \boxplus, 0_S)$                                  | Def. 29.7.2.1(1)        |
| 2   | 4  | $\text{GrpHom}(g; S, \boxplus, 0_S; T, \uplus, 0_T)$                                  | Def. 29.7.2.1(2)        |
| 1,2 | 5  | $\text{GrpHom}(g \circ f; R, \oplus, 0_R; T, \uplus, 0_T)$                            | Th. 29.4.2.1(3,4)       |
| 1   | 6  | $\text{MonHom}(f; R, \odot, 1_R; S, \boxtimes, 1_S)$                                  | Def. 29.7.2.1(1)        |
| 2   | 7  | $\text{MonHom}(g; S, \boxtimes, 1_S; T, \otimes, 1_T)$                                | Def. 29.7.2.1(2)        |
| 1,2 | 8  | $\text{MonHom}(g \circ f; R, \odot, 1_R; T, \otimes, 1_T)$                            | Th. 27.2.5.1(6,7)       |
| 1   | 9  | $\text{Ring}(R, \oplus, \odot, 0_R, 1_R)$                                             | Def. 29.7.2.1(1)        |
| 2   | 10 | $\text{Ring}(T, \uplus, \otimes, 0_T, 1_T)$                                           | Def. 29.7.2.1(2)        |
| 1,2 | 11 | $\text{RingHom}(g \circ f; R, \oplus, \odot, 0_R, 1_R; T, \uplus, \otimes, 0_T, 1_T)$ | Def. 29.7.2.1(9,10,5,8) |

## 7.4 Spezielle Definitionen

Für kommutative Ringe bleiben die Erhaltungsgleichungen unverändert. Die Kommutativität gehört zu den beiden beteiligten Ringstrukturen und ist keine zusätzliche Forderung an die Abbildung.

**Definition 29.7.4.1 (Homomorphismen kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$

**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

**Neues Symbol:**

**Symbol:**  $\triangleright \text{KRingHom}$

$$\text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

$$:= \text{KRing}(R, \oplus, \odot, 0_R, 1_R) \wedge \text{KRing}(S, \boxplus, \boxtimes, 0_S, 1_S)$$

$$\wedge \text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Axiom 29.7.4.1 (Quellstruktur eines Homomorphismus kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$

**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash \text{KRing}(R, \oplus, \odot, 0_R, 1_R)$$

**Axiom 29.7.4.2 (Zielstruktur eines Homomorphismus kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash \text{KRing}(S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Axiom 29.7.4.3 (Ringhomomorphismusanteil eines Homomorphismus kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash \text{RingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Definition 29.7.4.2 (Isomorphismen kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$   
**Neues Symbol:**  
**Symbol:**  $\triangleright \text{KRingIso}$

$$\begin{aligned} & \text{KRingIso}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \\ & := \text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \\ & \wedge f: R \xrightarrow{\sim} S \end{aligned}$$

**Axiom 29.7.4.4 (Homomorphismusanteil eines Isomorphismus kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{KRingIso}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash \text{KRingHom}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S)$$

**Axiom 29.7.4.5 (Bijektivität eines Isomorphismus kommutativer Ringe).**

**Mengen:**  $R, S, 0_R, 1_R, 0_S, 1_S$   
**Funktionen:**  $f, \oplus, \odot, \boxplus, \boxtimes$

$$\text{KRingIso}(f; R, \oplus, \odot, 0_R, 1_R; S, \boxplus, \boxtimes, 0_S, 1_S) \vdash f: R \xrightarrow{\sim} S$$

Die Kommutativität der Multiplikation ist wiederum kein zusätzliches Erhaltungsgesetz. Sie wird durch einen Ringisomorphismus in beide Richtungen transportiert.

## Kapitel 8

# Die algebraische Struktur der ganzen Zahlen

In den folgenden Beweisen bezeichnen  $0_{\mathbb{Z}}$  und  $1_{\mathbb{Z}}$  die in Band 13 konstruierten neutralen Elemente. Sämtliche Rechengesetze werden aus den dort registrierten Sätzen übernommen; die Schlusszeilen verwenden ausschließlich die abstrakten Strukturdefinitionen dieses und des vorangehenden Bandes.

### 8.1 Die additive abelsche Gruppe

**Theorem 29.8.1.1 (Additive abelsche Gruppe der ganzen Zahlen).**

*Mengen:*  $\mathbb{Z}, 0_{\mathbb{Z}}, z, w, u$   
*Funktionen:*  $+$

$$\text{AGrp}(\mathbb{Z}, +, 0_{\mathbb{Z}})$$

*Beweis.*

**Additive Halbgruppe**

Th. 29.8.1.1(i)

$$\text{HGr}(\mathbb{Z}, +)$$

## 8.4 Der kanonische Ringhomomorphismus aus den ganzen Zahlen

Sei  $\text{Ring}(R, \oplus, \odot, 0_R, 1_R)$ . Nach Th. 29.7.1.1 ist  $R$  auch ein Halbring, also steht die kanonische Abbildung  $\eta_{R, \oplus, \odot, 0_R, 1_R} : \mathbb{N} \rightarrow R$  aus Band 28 zur Verfügung. Ein Differenzenpaar  $(a, b)$  soll auf die Differenz seiner beiden Bilder abgebildet werden.

### 8.4.1 Repräsentantenunabhängigkeit

**Theorem 29.8.4.1 (Kreuzsummen liefern gleiche Differenzen im Ring).**

**Mengen:**  $R, 0_R, 1_R, p, q, r, s$

**Funktionen:**  $\oplus, \odot$

$$\begin{aligned} &\text{Ring}(R, \oplus, \odot, 0_R, 1_R), \quad p, q, r, s \in R, \quad p \oplus s = q \oplus r \\ &\vdash p \oplus (-q) = r \oplus (-s) \end{aligned}$$

Im folgenden Beweis kürzen wir  $\bar{q} := -q$  und  $\bar{s} := -s$  ab.

|             |    |                                                                                                      |                                 |
|-------------|----|------------------------------------------------------------------------------------------------------|---------------------------------|
