

Bd. 22 - Endliche Wörter und Klammerungsbäume

Martin Kunze

Inhaltsverzeichnis

1	Einführung	2
2	Endliche Wörter	3
2.1	Wortmenge und Länge	3
2.2	Leerwort, Buchstabenwörter und Nichtleerwörter	6
2.3	Konkatenation	11
2.4	Endzerlegung, Induktion und Rekursion	22
2.5	Linksfaltung eines Wortes	48
3	Volle planare Klammerungsbäume	53
3.1	Eine konkrete Wortcodierung	53
3.2	Baumstufen und Baumträger	59
3.3	Strukturinduktion und Strukturrekursion	69
4	Blattwörter, Klammerungen und Auswertung	96
4.1	Blattwort	96
4.2	Klammerungen eines Wortes	100
4.3	Auswertung eines Klammerungsbaums	102

Kapitel 1

Einführung

Dieser Band stellt die kombinatorischen Werkzeuge bereit, mit denen später Produkte beliebiger endlicher Länge behandelt werden. Endliche Wörter werden als spezielle endliche Folgen konstruiert. Volle planare Binärbäume werden anschließend durch eindeutig zerlegbare Wörter codiert. Insbesondere werden weder eine Wortstruktur noch eine Baumstruktur axiomatisch vorausgesetzt. Induktion und Rekursion auf diesen Mengen sind Sätze, die auf der natürlichen Induktion und dem Dedekindschen Rekursionssatz beruhen.

Die Trennung ist für die folgenden Bände wesentlich: Erst Band 23 führt mit der Halbgruppe wieder eine axiomatisch definierte algebraische Struktur ein. Assoziativität wird dort genau einmal im Blockgesetz benutzt; die übrige Umklammerungsaussage folgt aus den hier konstruierten Werkzeugen.

Kapitel 2

Endliche Wörter

2.1 Wortmenge und Länge

Ein Wort über A ist der Funktionsgraph einer nullbasierten endlichen Folge mit Werten in A . Die folgende Definition ist durch $\mathcal{P}(\mathbb{N} \times A)$ gebunden und bezeichnet daher eine Menge.

Definition 22.2.1.1 (Menge der endlichen Wörter).

Mengen: A, w, n, A^*

Neues Symbol:

Endliche Wörter: $\triangleright A^*$

$$A^* := \{w \in \mathcal{P}(\mathbb{N} \times A) \mid \exists n \in \mathbb{N} (w: \mathbb{N}_{<n} \rightarrow A)\}$$

Theorem 22.2.1.1 (Typisierte endliche Folgen sind endliche Wörter).

Mengen: A, a, i, n, w, z

$$n \in \mathbb{N}, w: \mathbb{N}_{<n} \rightarrow A \vdash w \in A^*$$

1	1	$n \in \mathbb{N}$	A
2	2	$w: \mathbb{N}_{<n} \rightarrow A$	A
2	3	$w \subseteq \mathbb{N}_{<n} \times A$	Def. 5.2.1.1(2)
1	4	$\mathbb{N}_{<n} \subseteq \mathbb{N}$	Th. 10.4.6.2(1)
5	5	$z \in w$	A
1,2,5	6	$z \in \mathbb{N}_{<n} \times A$	Th. 3.5.2.6(3,5)
1,2,5	7	$\exists i \in \mathbb{N}_{<n} \exists a \in A z = (i, a)$	Th. 3.16.5.4(6)
8	8	$i \in \mathbb{N}_{<n} \wedge a \in A \wedge z = (i, a)$	A
8	9	$i \in \mathbb{N}_{<n}$	$\wedge E1(8)$

8 10 $a \in A \wedge z = (i, a)$	$\wedge E2(8)$
8 11 $a \in A$	$\wedge E1(10)$
8 12 $z = (i, a)$	$\wedge E2(10)$
1,8 13 $i \in \mathbb{N}$	Th. 3.5.2.6(4,9)
1,8 14 $(i, a) \in \mathbb{N} \times A$	Th. 3.16.5.9(13,11)
1,8 15 $z \in \mathbb{N} \times A$	$= E(12, 14)$
1,2,5 16 $z \in \mathbb{N} \times A$	$\exists E(7, 8, 15)$
1,2 17 $\forall z (z \in w \rightarrow z \in \mathbb{N} \times A)$	$\forall I(\rightarrow I(5, 16))$
1,2 18 $w \subseteq \mathbb{N} \times A$	Def. 3.5.1.1(17)
1,2 19 $w \in \mathcal{P}(\mathbb{N} \times A)$	Th. 3.16.2.1(18)
1,2 20 $w \in A^*$	Def. 22.2.1.1(19,1,2)

Theorem 22.2.1.2 (Eindeutige Länge eines endlichen Wortes).

Mengen: A, w, m, n

$$w \in A^* \vdash \exists! n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$$

1 1 $w \in A^*$	A
1 2 $\exists n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$	Def. 22.2.1.1(1)
3 3 $m \in \mathbb{N} \wedge w : \mathbb{N}_{<m} \rightarrow A$	A
4 4 $n \in \mathbb{N} \wedge w : \mathbb{N}_{<n} \rightarrow A$	A
3,4 5 $\mathbb{N}_{<m} = \mathbb{N}_{<n}$	Def. 5.2.1.1(3,4)
3,4 6 $\mathbb{N}_{<m} \subseteq \mathbb{N}_{<n}$	Th. 3.5.3.3(5)
3,4 7 $\mathbb{N}_{<n} \subseteq \mathbb{N}_{<m}$	Th. 3.5.3.4(5)
3,4 8 $m \leq n$	Th. 10.4.6.22(3,4,6)
3,4 9 $n \leq m$	Th. 10.4.6.22(3,4,7)
3,4 10 $m = n$	Th. 10.4.5.25(3,4,8,9)
11 $\forall m \forall n \left((m \in \mathbb{N} \wedge w : \mathbb{N}_{<m} \rightarrow A) \wedge (n \in \mathbb{N} \wedge w : \mathbb{N}_{<n} \rightarrow A) \rightarrow m = n \right)$	$\forall I(\forall I(\rightarrow I(\wedge I(3,4), 10)))$
12 $\exists^{\leq 1} n (n \in \mathbb{N} \wedge w : \mathbb{N}_{<n} \rightarrow A)$	Th. 2.10.8.1(11)
1 13 $\exists! n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$	Th. 2.10.9.4(2,12)

Definition 22.2.1.2 (Länge eines endlichen Wortes).

Mengen: A, w, n

Neues Symbol:

Wortlänge: $\triangleright |w|$

$$w \in A^* \vdash |w| := \iota n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$$

Theorem 22.2.1.3 (Typisierung durch die Wortlänge).

Mengen: A, w

$$w \in A^* \vdash \begin{array}{l} (i) |w| \in \mathbb{N} \\ (ii) w : \mathbb{N}_{<|w|} \rightarrow A \end{array}$$

Beweis.

Natürlichkeit der Wortlänge

Th. 22.2.1.3(i)

$$w \in A^* \vdash |w| \in \mathbb{N}$$

1	1	$w \in A^*$	A
1	2	$\exists! n (n \in \mathbb{N} \wedge w : \mathbb{N}_{<n} \rightarrow A)$	Th. 22.2.1.2(1)
1	3	$ w = \iota n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$	Def. 22.2.1.2(1)
1	4	$ w \in \mathbb{N} \wedge w : \mathbb{N}_{< w } \rightarrow A$	Th. 2.10.9.7(2,3)
1	5	$ w \in \mathbb{N}$	$\wedge E1(4)$

Typisierung des Wortes

1	3	$ w = \iota n \in \mathbb{N} (w : \mathbb{N}_{<n} \rightarrow A)$	Def. 22.2.1.2(1)
1	4	$ w \in \mathbb{N} \wedge w : \mathbb{N}_{< w } \rightarrow A$	Th. 2.10.9.7(2,3)
1	5	$w : \mathbb{N}_{< w } \rightarrow A$	$\wedge E2(4)$

□

Theorem 22.2.1.4 (Länge aus einer gegebenen Worttypisierung).

Mengen: A, w, n, k

$$w \in A^*, n \in \mathbb{N}, w : \mathbb{N}_{<n} \rightarrow A \vdash |w| = n$$

1	$1 \ w \in A^*$	A
2	$2 \ n \in \mathbb{N}$	A
3	$3 \ w: \mathbb{N}_{<n} \rightarrow A$	A
1	$4 \ w \in \mathbb{N}$	Th. 22.2.1.3(i)(1)
1	$5 \ w: \mathbb{N}_{< w } \rightarrow A$	Th. 22.2.1.3(ii)(1)
1	$6 \ \exists! k \in \mathbb{N} (w: \mathbb{N}_{<k} \rightarrow A)$	Th. 22.2.1.2(1)
1	$7 \ w \in \mathbb{N} \wedge w: \mathbb{N}_{< w } \rightarrow A$	$\wedge I(4, 5)$
2,3	$8 \ n \in \mathbb{N} \wedge w: \mathbb{N}_{<n} \rightarrow A$	$\wedge I(2, 3)$
1,2,3	$9 \ w = n$	Th. 2.10.9.1(6,7,8)

2.2 Leerwort, Buchstabenwörter und Nichtleerwörter

Definition 22.2.2.1 (Leerwort).

Mengen: A, ε_A
Neues Symbol:
Leerwort: $\triangleright \varepsilon_A$

$$\varepsilon_A := \emptyset$$

Theorem 22.2.2.1 (Das Leerwort hat Länge null).

Mengen: A

$$(i) \ \varepsilon_A \in A^* \\ (ii) \ |\varepsilon_A| = 0$$

Beweis.

Das Leerwort ist ein endliches Wort Th. 22.2.2.1(i)

$$\varepsilon_A \in A^*$$

1	$0 \in \mathbb{N}$	Ax. 10.3.1
2	$\mathbb{N}_{<0} = \emptyset$	Th. 10.4.6.5
3	$\varepsilon_A = \emptyset$	Def. 22.2.2.1
4	$\emptyset: \emptyset \rightarrow A$	Th. 5.3.4.7
5	$\varepsilon_A: \mathbb{N}_{<0} \rightarrow A$	$= E(2, 3, 4)$
6	$\varepsilon_A \in A^*$	Th. 22.2.1.1(1,5)

Die Länge ist null Th. 22.2.2.1(ii)

$$|\varepsilon_A| = 0$$

1 $0 \in \mathbb{N}$	Ax. 10.3.1
2 $\mathbb{N}_{<0} = \emptyset$	Th. 10.4.6.5
3 $\varepsilon_A = \emptyset$	Def. 22.2.2.1
4 $\emptyset: \emptyset \rightarrow A$	Th. 5.3.4.7
5 $\varepsilon_A: \mathbb{N}_{<0} \rightarrow A$	$= E(2, 3, 4)$
6 $\varepsilon_A \in A^*$	Th. 22.2.1.1(1,5)
7 $ \varepsilon_A = 0$	Th. 22.2.1.4(6,1,5)

□

Definition 22.2.2.2 (Menge der nichtleeren Wörter).

Mengen: A, A^*, A^+

Neues Symbol:

Nichtleere Wörter: $\triangleright A^+$

$$A^+ := A^* \setminus \{\varepsilon_A\}$$

Theorem 22.2.2.2 (Elementkriterium für nichtleere Wörter).

Mengen: A, w

$$w \in A^+ \dashv\vdash w \in A^* \wedge |w| \neq 0$$

Beweis.

$\vdash$:

1	1 $w \in A^+$	A
1	2 $w \in A^* \setminus \{\varepsilon_A\}$	Def. 22.2.2.2(1)
1	3 $w \in A^* \wedge w \notin \{\varepsilon_A\}$	Th. 3.12.1(2)
1	4 $w \in A^*$	$\wedge E1(3)$

Kapitel 3

Volle planare Klammerungsbäume

3.1 Eine konkrete Wortcodierung

Die Baumcodierung verwendet zwei Sorten von Zeichen. Ein Blattzeichen trägt ein Element von A ; ein Knotenzeichen speichert zusätzlich die Länge des linken Teilbaums. Diese Längenangabe macht die Zerlegung eines Knotencodes ohne syntaktische Metasprache eindeutig.

Definition 22.3.1.1 (Alphabet der Baumcodes).

Mengen: A, Σ_A
Neues Symbol:
Baumalphabet: $\triangleright \Sigma_A$

$$\Sigma_A := (\{0\} \times A) \cup (\{1\} \times \mathbb{N})$$

Definition 22.3.1.2 (Blattcode).

Mengen: A, a
Neues Symbol:
Blattcode: $\triangleright \text{Blatt}_A(a)$

$$a \in A \vdash \text{Blatt}_A(a) := \langle (0, a) \rangle$$

Theorem 22.3.1.1 (Wohldefiniertheit der Knotencodiertenaten).

Mengen: A, S, T

$$\begin{aligned}
S, T \in \Sigma_A^+ \vdash & (i) S \in \Sigma_A^* \\
& (ii) T \in \Sigma_A^* \\
& (iii) |S| \in \mathbb{N} \\
& (iv) |T| \in \mathbb{N} \\
& (v) (1, |S|) \in \Sigma_A \\
& (vi) \langle (1, |S|) \rangle \in \Sigma_A^+ \\

□

Nach Th. 22.3.1.1(viii) und Th. 22.3.1.1(ix) sind die beiden Argumente der äußeren Wortkonkatenation endliche Wörter. Damit ist die folgende Definition unter ihren angegebenen Voraussetzungen wohldefiniert.

Definition 22.3.1.3 (Knotencode).

Mengen: A, S, T
Neues Symbol:
Knotencode: $\triangleright \text{Knoten}_A(S, T)$

$$S, T \in \Sigma_A^+ \vdash \text{Knoten}_A(S, T) := \langle (1, |S|) \rangle \frown S \frown T$$

Theorem 22.3.1.2 (Konstruktortrennung und -injektivität).

Mengen: A, a, b, S, T, S', T'

- (i) $a, b \in A \vdash (\text{Blatt}_A(a) = \text{Blatt}_A(b) \leftrightarrow a = b)$
- (ii) $a \in A, S, T \in \Sigma_A^+ \vdash \text{Blatt}_A(a) \neq \text{Knoten}_A(S, T)$
- (iii) $S, T, S', T' \in \Sigma_A^+, \text{Knoten}_A(S, T) = \text{Knoten}_A(S', T') \vdash S = S'$
- (iv) $S, T, S', T' \in \Sigma_A^+, \text{Knoten}_A(S, T) = \text{Knoten}_A(S', T') \vdash T = T'$

Beweis.
